

Recommendation for Beile Zhang

16 October 2023

TO WHOM IT MAY CONCERN

Beile Zhang has been studying for a BSc in Computer Science in our Department since September 2021. I know him because I taught him sorting and asymptotic notation in the module “Algorithms and Data Structures” in his first year and probability and statistics in the module “Data Science” in his second year. He is currently in his final year and expected to graduate in Summer 2024.

In the “Algorithms and Data Structures” module, Beile did particularly well in the python programming part of the coursework, where he achieved 53 out of 65 marks (a percentage mark over 80%). In the “Data Science” module, Beile obtained a mark of 70% on the Probability and Statistics part of the written exam, and 64% overall on the written exam. Among his other second year modules, he has done exceptionally well in “Programming Paradigms”, with a module mark of 82%. In addition to his academic study, he has also gained professional experience in backend java programming for web applications during an internship with Tencent in his first year.

Beile is an enthusiastic, competent, and diligent student with strong programming and problem-solving skills. He is very interested in furthering his education with a postgraduate degree. Therefore, I am happy to recommend Beile highly for your Masters programme.

Yours faithfully,

Thomas Erlebach
Professor
